## Story #1

**Name:** Account Registration

**Actors:** Spectator

**Triggers/Preconditions:** Using features, not logged in and has no existing account

**Actions/Postconditions:** Display sign up form, create new account

**Acceptance Tests:** *Username*, presence: true, length: {minimum: 5}, restrictions: {a-z, A-Z, 0-9, -, and \_}; *firstname*, presence: true; *lastname*, presence: true; *email*, presence: true, restrictions: {a-z, A-Z, 0-9, ., @, and \_}, format: {end with @\_\_\_.\_\_}; *password*, presence: true, length: {minimum: 6}, restrictions: {one each of a-z, A-Z and 0-9}

assert *username* doesn't exist in database

**Required Behavior:** Display error message for acceptance test failure; new account created for acceptance test success

**Relevance:** Increase members

**Iteration:** 1

### Account Registration

Given a spectator is browsing web application, when they are trying to access features while currently aren't logged in and has no existing account, then a sign up form appears which permits ability to create a new account.

## Story #2

**Name:** Registration Verification

**Actors:** Spectator

**Triggers/Preconditions:** Successful Registration

**Actions/Postconditions:** Send verification e-mail

**Acceptance Tests:** -

**Required Behavior:** -

**Relevance:** Increase members

**Iteration:** 1

### Registration Verification

Given a spectator is browsing web application, when they successfully register a new account with application, then a verification e-mail is sent to spectator.

### Story #3

**Name:** Account Login

**Actors:** Spectator

**Triggers/Preconditions:** Using features, not logged in and has existing account

**Actions/Postconditions:** Display sign in form, log into account

**Acceptance Tests:** *Username*, presence: true;  
*password*, presence: true  
assert *e-mail* exists in database  
assert *e-mail* and *password* match in database

**Required Behavior:** Display error message for acceptance test failure; logged into account for acceptance test success

**Relevance:** Increase productivity

**Iteration:** 1

#### Account Login

Given a spectator is browsing web application, when they are trying to access features while currently aren't logged in and has existing account, then a sign in form appears which permits ability to log into account.

### Story #4

**Name:** Account Home Page

**Actors:** Spectator, regular user

**Triggers/Preconditions:** Log into account, successful credentials submitted

**Actions/Postconditions:** Render home page

**Acceptance Tests:** -

**Required Behavior:** -

**Relevance:** Convenience

**Iteration:** 1

#### Account Home Page

Given a spectator trying to access their account, when they are logging in and submitted successful credentials, then home page corresponding to their account is rendered.

### Story #5

**Name:** Account Logout

**Actors:** Regular user

**Triggers/Preconditions:** End session

**Actions/Postconditions:** Logged out

**Acceptance Tests:** -

**Required Behavior:** -

**Relevance:** Security

**Iteration:** 1

#### Account Logout

Given a regular user who is currently signed into their account, when they want to end their session, then they are logged out of their account.

## Story #6

**Name:** Account Monitoring

**Actors:** Administrator

**Triggers/Preconditions:** Username “masteruser” as administrator logged into account

**Actions/Postconditions:** Render user list, display remove regular users form and add users form, update regular users

**Acceptance Tests:** *Username*, presence: true, length: {minimum: 5}, restrictions: {a-z, A-Z, 0-9, -, and \_}; *firstname*, presence: true; *lastname*, presence: true; *email*, presence: true, restrictions: {a-z, A-Z, 0-9, ., @, and \_}, format: {end with @\_\_\_.\_\_}; *password*, presence: true, length: {minimum: 6}, restrictions: {one each of a-z, A-Z and 0-9}

assert *username* doesn't exist in database

**Required Behavior:** Display error message for acceptance test failure; inform administrator of action change for acceptance test success

**Relevance:** Convenience, security

**Iteration:** 1 (continuation in iteration 2)

### Account Monitoring

Given an administrator currently logged into their account, when they want to remove or add regular users, then privileges are granted.

## Story #7

**Name:** Secure Password

**Actors:** Spectator

**Triggers/Preconditions:** Account registration, successful credentials submitted

**Actions/Postconditions:** Create new account

**Acceptance Tests:** -

**Required Behavior:** -

**Relevance:** Security

**Iteration:** 1

### Secure Password

Given a spectator is browsing web application, when they successfully register an account, then hashed and salted password is placed in database.

## Story #8

**Name:** Service Navigation

**Actors:** Spectator, regular user

**Triggers/Preconditions:** Visit pages

**Actions/Postconditions:** Rendering desired pages

**Acceptance Tests:** *Username [session]*,  
presence: true

assert *username [session]* matches *username*

**Required Behavior:** Redirect to login and registration page upon acceptance test failure; redirect to desired page with navigation link click upon acceptance test pass

**Relevance:** Convenience

**Iteration:** 2

### Service Navigation

Given a spectator is browsing web application, when they successfully log into their account, then visiting pages is permitted with use of navigation bar.

## Story #9

**Name:** Restaurant for Dining

**Actors:** Regular user

**Triggers/Preconditions:** Log into account, successful credentials submitted, visit restaurant page

**Actions/Postconditions:** Display weekly restaurant used for dining

**Acceptance Tests:** -

**Required Behavior:** Output restaurant name if restaurant image failed to render properly

**Relevance:** Convenience

**Iteration:** 2 (continuation in iteration 3)

### Restaurant for Dining

Given a spectator is browsing web application, when they successfully log into their account, then visiting restaurant page with navigation bar will display weekly restaurant used for dining.

## Story #10 (Continuation of Story #6)

**Name:** User List Functionality

**Actors:** Administrator

**Triggers/Preconditions:** <Story #6>, click sort by user name, first name, or last name button

**Actions/Postconditions:** <Story #6>, sort user list by user name, first name, or last name

**Acceptance Tests:** -

**Required Behavior:** <Story #6>, properly update user list at user list location

**Relevance:** <Story #6>

**Iteration:** 2

### User List Functionality

Given an administrator currently logged into their account, when they want to sort user list by user name, first name, or last name, then user list is properly updated at user list location by clicking associated sort button.

## Story #11

**Name:** Request Date

**Actors:** Regular user

**Triggers/Preconditions:** Log into account, successful credentials submitted, request date button associated to user is clicked

**Actions/Postconditions:** Requested date

**Acceptance Tests:** -

**Required Behavior:** Update user in database who received date invitation

**Relevance:** Convenience,

**Iteration:** 2

### Request Date

Given a spectator is browsing web application, when they successfully log into their account, then clicking request date button associated to user will send date invitation.

## Story #12

**Name:** Date Decision

**Actors:** Regular user

**Triggers/Preconditions:** Log into account, successful credentials submitted, user receives date invitation

**Actions/Postconditions:** Display notification message with decline and accept buttons

**Acceptance Tests:** -

**Required Behavior:** Erase invitation by clicking decline button and continue invitation process by clicking accept button

**Relevance:** Convenience

### Date Decision

Given a spectator is browsing web application, when they successfully log into their account and someone has sent them date invitation, then notification message is displayed with decline and accept buttons.

## Story #13

**Name:** Date Status

**Actors:** Regular user

**Triggers/Preconditions:** Log into account, successful credentials submitted, user accepts invitation

**Actions/Postconditions:** Notification e-mail is sent to user who requested date and their request is accepted

**Acceptance Tests:** -

**Required Behavior:** -

**Relevance:** Convenience

**Iteration:** 2 (continuation in iteration 3)

### Date Status

Given date request is accepted for user, when they check their e-mail account, they will have notification e-mail from Dine Roulette.

## Story #14 (Continuation of Story #9)

**Name:** Randomized Restaurant

**Actors:** Regular user

**Triggers/Preconditions:** <Story #6>

**Actions/Postconditions:** <Story #6>, restaurant of week for dining is randomized on weekly basis

**Acceptance Tests:** -

**Required Behavior:** <Story #6>, changed in relation to timestamp

**Relevance:** Convenience

**Iteration:** 3

### Randomized Restaurant

Given a spectator is browsing web application, when they successfully log into their account, then visiting restaurant page with navigation bar will display weekly randomized restaurant used for dining.

## Story #15 (Continuation of Story #13)

**Name:** Notification E-mail

**Actors:** Regular user

**Triggers/Preconditions:** <Story #7>, continue with user invitation process

**Actions/Postconditions:** Notification e-mail is sent to participants upon date cancellation or completed Paypal payment

**Acceptance Tests:** -

**Required Behavior:** -

**Relevance:** Convenience

**Iteration:** 3

### Notification E-mail

Given date request is cancelled or Paypal payment is completed, when they check their e-mail account, they will have notification e-mail from Dine Roulette.

## Story #16

**Name:** Secondary Information

**Actors:** Regular user

**Triggers/Preconditions:** Clicking user

**Actions/Postconditions:** User's secondary information is rendered

**Acceptance Tests:** -

**Required Behavior:** -

**Relevance:** Convenience

**Iteration:** 3

### Secondary Information

Given a spectator is browsing web application, when they successfully log into their account, then clicking a user will render following user's secondary information.

## Story #17

**Name:** Information Retention

**Actors:** Regular user

**Triggers/Preconditions:** Switching between pages, regular user logged into service

**Actions/Postconditions:** Execute AJAX calls

**Acceptance Tests:** -

**Required Behavior:** Switch between internal pages without page refresh

**Relevance:** Convenience

**Iteration:** 3

### Information Retention

Given a spectator is browsing web application, when they successfully log into their account, then visiting internal pages occurs without page refreshes.

## Story #18

**Name:** Google Maps View

**Actors:** Regular user

**Triggers/Preconditions:** Log into account, successful credentials submitted, visit restaurant page

**Actions/Postconditions:** Display Google Maps

**Acceptance Tests:** -

**Required Behavior:** -

**Relevance:** Convenience

**Iteration:** 3

### Google Maps View

Given a spectator is browsing web application, when they successfully log into their account, then visiting restaurant page with navigation bar will display weekly restaurant used for dining and location will be indicated on Google Maps.

## Story #19

**Name:** Paypal Payment

**Actors:** Regular user

**Triggers/Preconditions:** User makes payment with Paypal

**Actions/Postconditions:** Paypal is utilized with assistance from Dine Roulette application

**Acceptance Tests:** -

**Required Behavior:** -

**Relevance:** Convenience

**Iteration:** 3

### Paypal Payment

Given a spectator is browsing web application, when they successfully log into their account and want to make payment, then Paypal can be utilized to complete transaction.

# Velocity

## Convention

User stories can be used to measure progress. This is done by assigning integer values called Story Points to user stories in accordance to their level of difficulty. By accumulating total story points we are able to dictate rate of delivery called Velocity.

**Story Points** - 1 means straight forward  
2 means intermediate  
3 means complex

**Velocity** - Average number of story points per iteration.

## Velocity of Iteration #1

### Stories Implemented

- #1 - Account Registration - Story Points: 2
- #2 - Registration Verification - Story Points: 1
- #3 - Account Login - Story Points: 1
- #4 - Account Home Page - Story Points: 1
- #5 - Account Logout - Story Points: 1
- #6 - Account Monitoring - Story Points: 2
- #7 - Secure Password - Story Points: 1

***Dine Roulette***

Velocity of iteration #1 is 9.

## Velocity of Iteration #2

### Stories Implemented

- #8 - Service Navigation - Story Points: 1
- #9 - Restaurant for Dining - Story Points: 1
- #10 - User List Functionality - Story Points: 2
- #11 - Request Date - Story Points: 2
- #12 - Date Decision - Story Points: 2
- #13 - Date Status - Story Points: 2

***Dine Roulette***

Velocity of iteration #2 is 10.

## Velocity of Iteration #3

### Stories Implemented

- #14 - Randomized Restaurant - Story Points: 2
- #15 - Notification E-mail - Story Points: 1
- #16 - Secondary Information - Story Points: 1
- #17 - Information Retention - Story Points: 2
- #18 - Google Maps View - Story Points: 2
- #19 - Paypal Payment - Story Points: 2

### ***Dine Roulette***

Velocity of iteration #3 is 10.
